Dear Survata team,

I am a software developer with experience in Rails, Javascript, FLUX/React.js, and have a background in Business Economics and Mathematics. I am interested in the Full-Stack Developer position at Survata and would love to help build Survata's innovative survey platform. Here is a quick rundown of who I am:

I know how to learn - Recently I taught myself Ember.js in one week. The following week, I built [GOSpot](#), a single-page web application that revolves around a parimutuel betting system and implements a bin-packing algorithm to quickly and efficiently distribute winning payouts. I am proficient at quickly learning a vast array of material and immediately applying it.

I know how to work - At my previous position I was promoted through three positions in 16 months. I started as an entry-level analyst and quickly developed the technical skills to plan civil construction and draft my designs with AutoCAD utility software. I am keen on finding opportunities to improve and support my team whenever possible.

I love what I do - I built my first computer when I was seven and been actively involved in technology ever since. My education at App Academy and past experiences have taught me to take pride in my work and that executing tasks canonically is of equal importance as meeting deadlines. I am confident I would be an excellent addition to Survata's team.

I have included my resume for your reference. Additional information and my recent projects can be seen at my [portfolio](#) website. I hope to continue the conversation with you on how I would be a great fit as the newest developer on Survata's team.

Thanks,

Ian Nguyen
